

Thakshila Nuwangi - Full Stack Developer

Location: Wellington | Phone: 022 451 3703 | Email: thakshilanuwangi123@gmail.com | LinkedIn: [Thakshila Nuwangi](#)

Professional Summary

I'm a software engineer with over 4 years experience, who loves building things with a great team around me. Both in NZ and overseas I was building features and system improvements in teams running Agile environments. There was often a fair amount of pressure, and heaps of learning as well, including picking up new tech like Node.js and AWS from a Java and Spring Boot background, which was awesome. I was also very comfortable teaching/mentoring those around me if they needed it, including supporting junior engineers, giving and receiving feedback and also communicating across disciplines and with the client/customer. I have taken responsibility for production support and on call work, and I am a problem solver who cares about keeping things running smoothly. What I enjoy most is when the team hits a big problem and works through it together until we finally get the product over the line. I like getting stuck into tough problems and finding ways to make systems more reliable and easier for other developers to work with.

Core Skills

- **Planning and building solutions:** I have built a number of custom products for high level international brands, understanding business requirements, designing solutions, working in Agile/Scrum teams, writing technical documentation.
- **Team collaboration:** I have mentored and been mentored by others. I work closely with those around me to get the most out of the team. I love celebrating wins and solving tough problems.
- **Communication:** Happy to give and receive feedback, build rapport with team and stakeholders fast and be able to communicate across teams and technical understanding.
- **Building software:** Java, Spring Boot, Hibernate/JPA, REST APIs, JSON, XML, Microservices, Angular, JavaScript, HTML5, CSS3
- **Working with data:** PostgreSQL (extensive), Redis, Elasticsearch, SQL, connecting systems together, integrating with third-party APIs, data modelling
- **Testing and shipping code:** Unit and integration testing, Git, CI/CD pipelines (GitHub Actions, Jenkins, GitLab CI), supporting deployments and releases
- **Cloud and infrastructure:** Docker, Kubernetes/OpenShift, Splunk, Dynatrace, Azure (currently working toward AZ-204)
- **AI-Assisted Development:** GitHub Copilot, Claude Code, Cursor, Perplexity, Lumos (internal AI tool at CodeGen International)

Key Projects

- **TimeVault – Booking Platform (Lexion Labs):** Learned Node.js and AWS on the job, shipped backend and front end tickets, alongside two technical leads and a QA tester in a small, fully remote team.
- **Top Care Cleaning – Website & Booking Flow:** Built API integrations and SEO enhancements alongside two front end engineers, lifting user engagement by 20%.
- **TravelBox – Travel Booking Platform (CodeGen International):** Built & modified a booking and payment APIs and drove a four month accessibility push within a 30+ person agile team, improving user experience by 40%.
- **Patient Management System (Institute of Software Engineering):** Designed a secure, API based architecture for scheduling and billing as part of a five person engineering team, lifting system performance by 30%.
- **Inventory Management System (University Group Project):** Enhanced relational data models and reporting accuracy for Salon Biscuits Limited as part of an 11 person team, improving system performance by 20%.

New Zealand Work experience

Software Engineering Intern, [Lexion Labs](#), Wellington (Sep 2025 – Feb 2026)

Lexion Labs is a software development company that has two SaaS cloud based products. One focused on managing bookings for service-based businesses and the other on ticketing and management for community events like musical shows and cultural festivals.

- I was one of the core developers completing tickets across the backend API and front end for TimeVault, a booking platform that lets businesses like salons and their customers manage appointments, working closely with two technical leads and a QA tester through each release.
- Learned Node.js and AWS on the job and used them to build and ship features including a new image upload capability that is now live in production.
- Designed and tested REST APIs, and built the confidence and business knowledge to work through problems independently when the technical leads were not available.

- Supported GitHub Actions CI/CD, used Docker, and I was on call out of hours for production support using Splunk and Dynatrace.

Work experience from Sri Lanka

Software Engineer (Aug 2022 -Feb 2023), Intermediate Software Engineer (Feb 2023 – Sep 2024) – [CodeGen International](#), Sri Lanka

CodeGen International develops intelligent, high-performance technology solutions across industries including travel, education, transportation, etc and autonomous AI-powered technologies.

- Worked within a large cross functional delivery team of over 30 people on the TravelBox project, alongside a technical lead, solution architect, senior and junior engineers, a business analyst, and a QA team, delivering through two week agile sprints and presenting completed work to the client.
- Owned a core module from design to going live, took responsibility for splitting the workload across junior engineers on the team and making sure they had what they needed to deliver on time.
- When a client, British Airways, requested 15 new features with only six hours notice before a demo, worked with the team to prioritise the list and split the work, delivering all 15 features in time and helping win the project.
- Stayed on a late night call with the team lead and the UK team to resolve a release that failed right after signoff, working through the pipeline issue until the code was running and tested before it could affect any users.
- Spent four months focused on accessibility and usability improvements across the platform alongside ongoing backend API and content development, learning Angular from scratch along the way.
- Developed secure RESTful APIs and integrations with internal systems, payment gateways, and external vendor platforms, and improved system performance by 20% through backend optimisation.
- Implemented unit and integration testing using JUnit and Mockito
- Contributed to CI/CD processes, including troubleshooting live issues.

Full Stack Developer – [Institute of Software Engineering](#), Sri Lanka (Mar 2021 – July 2022)

The Institute of Software Engineering (IUSE) is a, focused on developing industry ready professionals through practical, technology-driven training in modern software development.

- Worked as part of a small engineering team of five, reporting to a technical lead, delivering freelance client projects including a patient management system built for an overseas customer.
- Built strong working relationships across the team while learning on the job, and developed the judgement to know when to work through a problem independently and when to bring it to a senior engineer.
- Designed a secure, API based architecture for scheduling and billing within that project, improving overall system performance and reliability.
- Designed database schemas and implemented CRUD operations in SQL. Built on the front end with HTML5, CSS3.
- Applied Git based version control and collaborative development practices as part of the wider team's workflow.

Education Qualifications

- Master of Information Technology Specialized in Data Science – Whitecliffe College, Wellington, NZ (11/2025)
- BSc in Physical Science (Computer Science, Statistics, Mathematics) – University of Peradeniya, Sri Lanka

Certification

- Microsoft Azure Developer Associate (AZ-204) – currently reading
- Oracle Cloud Infrastructure 2024 Certified Foundations Associate
- Comprehensive Master Java Developer – Institute of Software Engineering (July/2020)
- Web Application Design & Development – NIBM, Sri Lanka (12/2020)
- Diploma in Information Technology & E-Commerce – Pearson, USA (12/2021)
